Resource	Age	Description/Contents
Arizona Battery for Communication Disorders of Dementia (ABCD)	15:0 and up	The ABCD is a standardized test battery for the comprehensive assessment and screening of dementia patients. The results can be used for differential diagnoses, developing treatment goals and patient care plans, monitoring patient change over time, and discharge planning.
Functional Linguistic Communication Inventory (FLCI)	Adult	The FLCI is a standardized instrument for evaluating functional communication, including determining their baseline level of function, the severity of the dementia, and the patient's preserved functional skills.
Cognitive Linguistic Quick Test-Plus Complete Kit (CLQT+)	18:0 to 89:11	This is a criterion-referenced assessment tool to assist SLPs in quickly assessing strengths and weaknesses in five cognitive domains: attention, memory, executive functions, language, and visuospatial skills. This version also includes an optional administration path for people with aphasia.
EMST150 Respiratory Muscle Strength Training Guide	Adult	This resource addresses rehabilitative strategies to build respiratory muscle strength.
Standardized Training in Swallowing Physiology: Evidence-based Assessment Using the Modified Barium Swallowing Impairment Profile Approach	Adult	This resource provides standardized training in the anatomy and physiology of swallowing to facilitate a deeper understanding of the swallowing mechanism in order to accurately assess and target impairments.
Feeding Individuals with Swallowing Disorders	Adult	This DVD is designed to help caregivers who routinely feed clients by depicting common feeding practices in health care settings. It includes questions and learning tips to facilitate discussion on ideas to improve the feeding experience, clarify feeding misconceptions, and point out good feeding practices.

Resource	Age	Description/Contents
A Clinician's Guide to Successful Evaluation and Treatment of Dementia	Adult	This resource includes the following: the types and stages of dementia, assessment and evaluation, pharmacology, therapeutic interventions, direct cognitive therapy techniques, and best practices when working with patients with dementia.
Test of Integrated Language and Literacy Skills (TILLS)	6:0 to 18:11	This assessment tool can be used to identify and diagnose language and literacy disorders, document patterns of relative strengths and weaknesses, and track changes in language and literacy skills over time.
The Test of Narrative Language-2 (TNL-2)	4:0 to 15:11	This is a norm-referenced test that measures children's narrative language abilities (i.e., children's ability to understand and tell stories). Narration is an important aspect of spoken language (not usually measured by oral-language tests) that provides a critical foundation for literacy.
The Kaufman Speech Praxis Test for Children	Ages: 2:0 to 5:11	The Kaufman Speech Praxis Test (KSPT) is a norm-referenced, diagnostic test assisting in the identification and treatment of childhood apraxia of speech.
Kaufman Speech Praxis Treatment Kit	Pediatric	This resource uses a systematic and progressive approach of simplifying word pronunciation patterns to shape and expand verbal expression and make communication easier for children with childhood apraxia of speech and other speech sound disorders.
Phonological Awareness Training Program: A Speech Language Pathologist's Tool for Training Teachers	Pediatric	This resource is for SLPs who want to provide professional development for classroom educators in phonological awareness knowledge, skills, and instructional methods to improve children's literacy outcomes.

Resource	Age	Description/Contents
The PIXON Project Kit	Mainly pediatric	The Pixon Project Kit is an early language development program built around the use of low-tech manual communication boards that utilize core vocabulary words. The program provides materials and strategies needed to support effective early AAC intervention.
The Clinician's Guide To Treating Cleft Palate Speech	Pediatric	This textbook provides information on the effects of cleft and non-cleft velopharyngeal inadequacy (VPI) on communication development in children. It also includes information on interprofessional team decision-making, along with the diagnosis and management of the resulting disorders.
The Source for Children's Voice Disorders	Pediatric	This resource provides information on the treatment of children with typical voice disorders from interpreting the voice evaluation to designing treatment sessions.
